

One network. Shared direction. Local strength.

Connect your agreements to everyday delivery

iBoss Orange connects networks, groups and branches. Coordinate configuration, quality and collaboration centrally while giving every repairer a suitable daily workspace.

Client • Driver • Dealer • Repairer
Together in one integrated platform

One direction. Room for local operations.

From central agreement to local case

A practical network setup makes clear what is managed jointly and what belongs to the branch.

1

Organise the network

Set up networks, groups and bodyshops with employees and appropriate permissions. One user can work in several organisations.

2

Record your agreements

Manage insurer relationships, rates, documents and process controls. Higher-level agreements flow down according to the chosen configuration.

3

Let branches get on with work

Cases, planning, time recording and customer contact remain part of the bodyshop's everyday operation.

4

Make focused improvements

View capacity, workloads and quality actions within your scope. Turn a finding into a task with a responsible person.

Central coordination becomes valuable when branches can use it.

Your network name. Your agreements.

Give your network a recognisable identity and make clear which settings can be changed locally.

Your name and visual identity

Choose a name, colours, theme and button style. The relevant identity carries into connected portals, with Powered by iBoss Orange visible.

Effective-dated agreements

Manage rate agreements and TZC code sets by validity period. Retain their origin and the context of existing estimates.

Network-wide documents

Use central work orders, letterhead and watermarks. Where needed, enforce their use at branches below.

Configuration and checks

See what is configured, which connection works and where action is needed. A saved key is not treated as a working integration.

Recognition for customers. Clarity for every branch.

See where it is busy and where space opens up

Bring branch planning, dealer intakes and transport together. Actual configuration and work schedules form the starting point.

Four weeks side by side

View branches in rows with daily workload. Compare planned work with available repair hours.

Help dealers choose

Show connected dealers which repairer has capacity during the requested period while they create an intake.

Coordinate transport

Plan collection and return trips, combine vehicles within configured capacity and assign daily tasks to drivers.

Bring in support

Let bodyshops make individual cases or a period available to external estimators. The bodyshop retains control of access.

Connect the network's planning with the branch's daily schedule.

Make agreements verifiable

Connect network configuration with case evidence and financial responsibilities. Give every deviation a clear place.

Quality by branch

Review applicable standards, available competencies and open actions. Support internal audits with case records.

Tailored process controls

Configure information, warnings or blocks. Authorised exceptions carry a reason, validity and audit record.

Invoice at the right level

Choose network or bodyshop invoicing in the agreement. Central invoicing first requires an up-to-date ready-for-invoicing status from the branch.

Follow up and learn

Use satisfaction surveys, complaints and estimate analysis in discussions with branches. Keep demo KPIs separate from actual analysis.

One accountable way of working, from setup to completion.

iBoss Orange supports standards monitoring and audit preparation. It does not replace BOVAG certification or an independent audit; assessment includes automated and manual checks.

MAKE IT WORK FOR YOUR ORGANISATION

Let your network work as one

Follow the same assignment at network, group and branch level in a demonstration. See how central agreements become visible in everyday delivery.

Start with your structure

Your branches, groups, roles and preferred central agreements.

Choose a familiar network journey

Dealer intake, capacity selection, repair, quality and optional central invoicing.

Make the pilot measurable

Agree data, integrations and acceptance criteria before wider adoption.

Experience it for yourself

Request a personal demonstration
